These artwork files have been formatted as SVG and PNG formats and are intended for use in online media.

The SVG files are highly recommended as they are resolution-independent and will look good at almost any size you scale them to, but please check with your web developers that your website can properly display the SVG format files (most modern sites can now do this).

The PNG files are supplied in arbitrary small, medium and large sizes, they may be of use at these sizes, or you may have to scale them to fit your preferred size. If you do have to scale them it is advisable to use the large size graphic and scale down (to best preserve detail and image quality).

You will need to know how to use standard professional Desktop web Publishing applications to do this, or delegate the job to a competent Graphic Designer. Alternatively you may be able to successfully use these files if familiar with a Wordpress (or similar) editing interface.

The files have been created using Adobe Illustrator CC 2016, and all fonts have been converted to outlines, so ignore any font warnings you may see.
